

BIGGER ECONOMY, CLEANER AIR

AIR
POLLUTION
DOWN¹

**AIR QUALITY HAS IMPROVED WHILE
THE POPULATION, ECONOMY AND
ENERGY USE INCREASED.**

New ozone regulations set just a few years ago are working, safeguarding public health – a goal we all share.

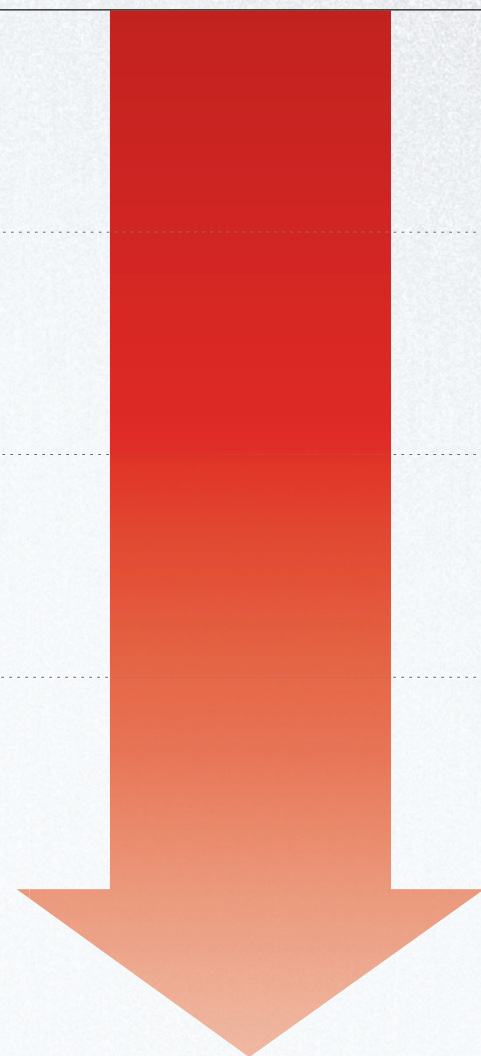

The EPA itself reports ozone levels have fallen 18% since 2000.

The EPA shows that since 1970, the nation's air quality has improved while the population, the economy, energy use and miles driven increased greatly. Even as the economy grows, levels of the six most common pollutants continue to drop.

Current standards – the strictest ever – are cutting pollution right now. We should let them work.

America can't afford unnecessary new rules that could be the costliest regulation ever. It could be a \$1,570² blow to families, risking jobs nationwide and slowing economic growth.

**DON'T CHANGE THE STRICT OZONE
REGULATIONS – THEY WORK.**
